

## Darts, a game for Android. Written in rfo-Basic!

Rules:

- You start with 301 points
- By throwing darts on the dart board you score points
- These scored points are subtracted from your total
- One turn consists of throwing 3 darts
- The game ends as soon as your total score is exactly zero and one of the darts in this turn is 'a double'.
- You always have to throw 3 darts per turn even if you reach zero with the first one being a double; you have to deliberately miss the other 2 darts !

What do you see on your display:

A dart is thrown by 'swiping' it towards the spot where you want it to land. E.g. when the next dart shows up in the lower right corner place your finger on it. Move your finger across the display to wherever you want the dart on the board and lift your finger off the display. Now the dart will fly towards the indicated spot. This is fairly inaccurate but with a little exercise (and a bit of luck) you'll probably get more skilled....

When a dart is just on a transition between two possible values, please accept the decision of the program ! Even if you might disagree....

The next picture shows some more info:

The outer ring (red/green) doubles the score. So one of your last darts have to be in this ring.

The middle ring (red/green) triples the score.

The inner ring (green) is the 'Bull' worth 25 points. The center disc (red) is called 'Bull's eye' and counts as a 'double' – 50 points.

The score of the current dart is briefly shown here.

Have fun !
